

Future Proof Your Business

The Challenge of Rising Energy Costs

The impact of huge energy price increases on businesses is being felt all around the UK. Some are seeing their bills rocket by over 1000% after fixed contracts are coming to an end. The impact of this situation threatens growth, productivity, pricing, profit margins, employment and the very real prospect of some firms closing down altogether.

Potential Solution

That's why The **Renewable Energy Independence Programme (REIP)** has been established as a solution based pathway to help as many UK businesses as possible tackle the problem and take swift action. This could be in the form of installing money saving renewable energy systems such as **Solar PV, Energy Storage Batteries, Infrared Heating, Air Source and Smart Electric Water Integrated Systems or even Mini Wind Turbine** where appropriate.

The REIP initiative was co-founded by two experienced local holistic business entrepreneurs Joel Tetlow and Graham Stuart bringing together a team of experts in their field and organisations who can help you to understand the most appropriate renewable energy solutions for your business. Once this has been done the appropriate cost saving technology systems can be installed and project managed on your behalf – without any capital outlay in many cases.

In addition to your business being able to overcome the challenge of high energy costs and becoming more energy independent there is the added benefit of significantly reducing your carbon footprint and making rapid transition to the low carbon economy.

Flexible funding facilities are in place to make this transition easier than ever and provide the ability for businesses to fast track the process with full project management provided.

Next Steps

If you are looking to **“Future Proof Your Business”** and become more Off-Grid dependent you need to take action now and have your questions answered. In the first instance please call Graham now for a no obligation chat on 07870 222771.
